

Weekly Status Report

CHRONOS / DATA ENGINEERING

Abdul Majeed

WEEK 05 | 2026-08-30 to 2026-09-05

Scenario-based activities grounded in Chronos; not verified personal work history.

LEAVE CONSISTENCY AND APPROVAL VISIBILITY

I expanded the reporting scope to leave conflicts and pending approvals. My focus was making operational exceptions visible without changing the application's transactional approval rules.

WORK COMPLETED

- Outlined checks for billable entries on approved vacation dates and identified submitted or finalized hours as a separate conflict category.
- Defined pending approval measures by employee, project, submission date, current status, and responsible reviewer.
- Documented routing differences between employee submissions and the project manager's own submissions.
- Separated current queue age from full approval-cycle duration, which requires rejection and resubmission history.

WORK IN PROGRESS

I am refining a management dashboard specification covering hours awaiting review, rejected submissions, and reporting exceptions.

RISKS AND DEPENDENCIES

Current status and latest timestamps cannot fully reconstruct repeated approval cycles. Historical events need to be evaluated before publishing end-to-end turnaround metrics.

NEXT WEEK

Review report-export eligibility, assignment offboarding, and access boundaries for reporting datasets.

OUTPUTS COVERED

Leave-conflict checks; approval-aging metric definitions; reviewer-routing reporting notes.
